

IDA INCIDENT REPORT

(JUNE 13, 2012 – SEPTEMBER 12, 2012)

Integrated Lakes Management – June 24, 2012 – Sugar Grove (Kane Co.): On June 20, 2012, Reward herbicide was applied to Lake Blackberry (a 7-acre private lake) to treat for coontail and algae. On June 23, 2012, residents discovered approximately 200 dead fish. Responsible party indicated that label instructions were followed. No further applications were made to the lake.

TruGreen, Inc. – July 6, 2012 – Collinsville (St. Clair Co.): A leak in a hose caused the release of 2-3 gallons of a 120 gallon tank mixture of Merit insecticide, fertilizer and water into the bed of the tank transport truck. Prior to knowledge of the leak, facility personnel started to drive the truck to the application site and approximately 16 ounces of the mixture spilled over the side of the truck and onto the street near a storm drain at the facility entrance/exit. Facility personnel used absorbent material to recover spillage from the street and the truck bed was decontaminated in the facility's operational containment structure.

Elkhart Fertilizer Service, Inc. – July 24, 2012 – Elkhart (Logan Co.): Facility was discovered to be open burning a plastic tarp and various boxes of containing unknown materials at the facility location. Burn pile measured approximately 12' x12'. IEPA/ERU ordered the fire to be extinguished and the facility complied.
