

INCIDENT REPORT

(DECEMBER 4, 2014 – MARCH 4, 2015)

Crop Production Services – February 20, 2015 – Browns (Edwards Co.): The incident involved a fire in the pesticide warehouse. Several different pesticides were stored within the packaged pesticide warehouse and there was a release onto the facility property. Dams and berms were constructed near all known culverts to prevent off-site migration of product. A yellowish discharge was noted that appears to have reached a nearby creek. Air monitoring system was set up to monitor for aromatic hydrocarbons. IEPA-EOU and the Illinois Dept. of Agriculture responded to the incident. The RP has hired a contractor to determine the extent of the pesticide release and perform clean-up operations.
